Resv. Data Types (must-have for interoperability)

The following parameters are considered for establishing Connections:

```
<xs:complexType name="ConnectionType">
    <xs:sequence>
        <xs:element name="ConnectionID" type="nsp:ConnectionIdentifierType"></xs:element>
        <xs:element name="Source" type="nspc:EndpointType"></xs:element>
        <xs:element name="Target" type="nspc:EndpointType" maxOccurs="unbounded"></xs:element>
        <xs:element name="Directionality" type="xs:int"></xs:element>
    </xs:sequence>
</xs:complexType>
<xs:complexType name="ConnectionConstraintType"><xs:complexContent><xs:extension base="nsp:ConnectionType">
    <xs:sequence>
        <xs:element name="MinBW" type="xs:long"></xs:element>
        <xs:element name="MaxBW" type="xs:long"></xs:element>
        <xs:element name="MaxDelay" type="xs:int" minOccurs="0"></xs:element>
        <xs:element name="DataAmount" type="xs:long" minOccurs="0"></xs:element>
    </xs:sequence>
</xs:extension></xs:complexContent></xs:complexType>
```

The following parameters are considered for {Fixed,Deferrable,Malleable} Reservations:

```
<xs:element name="StartTime" type="xs:dateTime"></xs:element>
<xs:element name="Duration" type="xs:int"></xs:element>
<xs:element name="Deadline" type="xs:dateTime"></xs:element> (only for Malleable and Deferrable Resvs.)
```

Topology Data Types (must-have for interop.)

The following parameters are considered for establishing Connections:

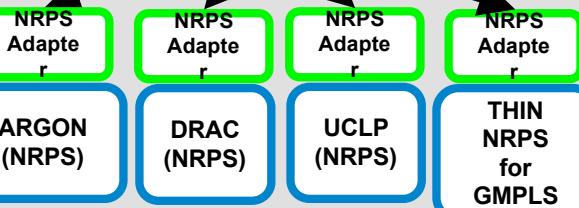

```
<xs:complexType name="DomainInformationType"><xs:sequence>
    <xs:element name="DomainId" type="ns1:DomainIdentifierType"></xs:element>
    <xs:element name="Description" type="xs:string" minOccurs="0"></xs:element>
    <xs:element name="ReservationEPR" type="xs:anyURI"></xs:element>
    <xs:element name="TopologyEPR" type="xs:anyURI"></xs:element>
        <xs:element name="TNAPrefixList" type="ns1:TNAPrefixType" minOccurs="0"
            MaxOccurs="unbounded"></xs:element>
</xs:sequence></xs:complexType>
<xs:complexType name="EndpointType"><xs:sequence>
    <xs:element name="EndpointId" type="ns1:EndpointIdentifierType"></xs:element>
    <xs:element name="Name" type="xs:string" minOccurs="0"></xs:element>
    <xs:element name="Description" type="xs:string" minOccurs="0"></xs:element>
    <xs:element name="Interface" type="ns1:EndpointInterfaceType" minOccurs="0"></xs:element>
    <xs:element name="DomainId" type="ns1:DomainIdentifierType" minOccurs="0"></xs:element>
    <xs:element name="Bandwidth" type="xs:int" minOccurs="0"></xs:element>
</xs:sequence></xs:complexType>
<xs:complexType name="Link"><xs:complexContent><xs:extension base="y:LinkIdentifierType"><xs:sequence>
    <xs:element name="Name" type="xs:string" minOccurs="0"></xs:element>
    <xs:element name="Description" type="xs:string" minOccurs="0"></xs:element>
    <xs:element name="Delay" type="xs:integer" minOccurs="0"></xs:element>
</xs:sequence></xs:extension></xs:complexContent></xs:complexType>
<xs:complexType name="LinkIdentifierType"><xs:sequence>
    <xs:element name="SourceEndpoint" type="nspc:EndpointIdentifierType"></xs:element>
    <xs:element name="DestinationEndpoint" type="nspc:EndpointIdentifierType"></xs:element>
</xs:sequence></xs:complexType>
```

WP1 developments Phase 1 M0-M18

Middleware (WP3)

Network Service Plane (NSP)

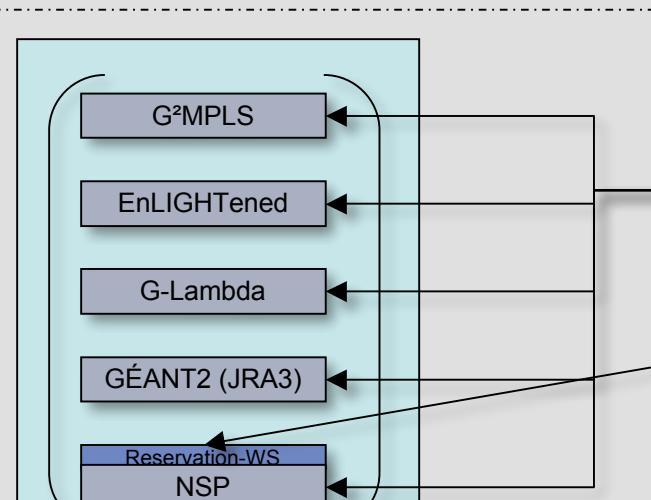

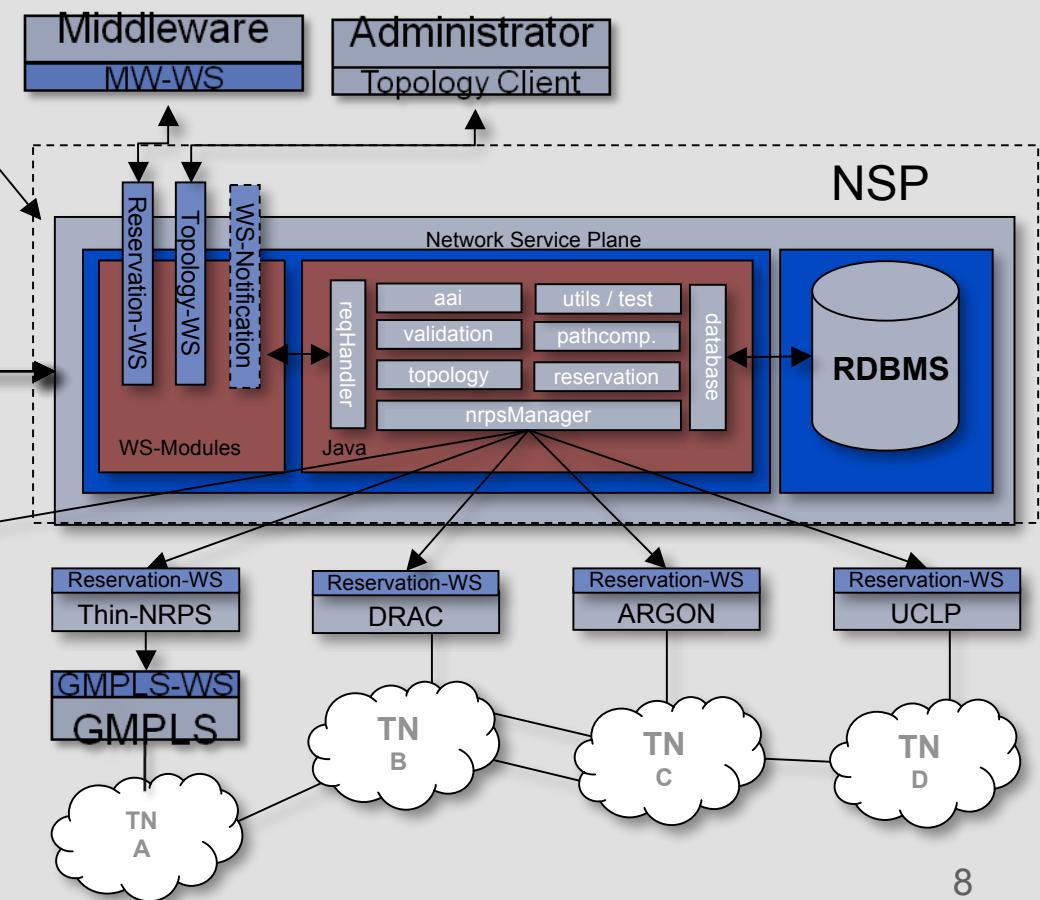

Provided by the partners

Implemented in WP1

- The NRPS Adapter is a generic open source module with a specific interface towards the NRPS
- After M18 the NSP will be enhanced to implement a distributed system architecture

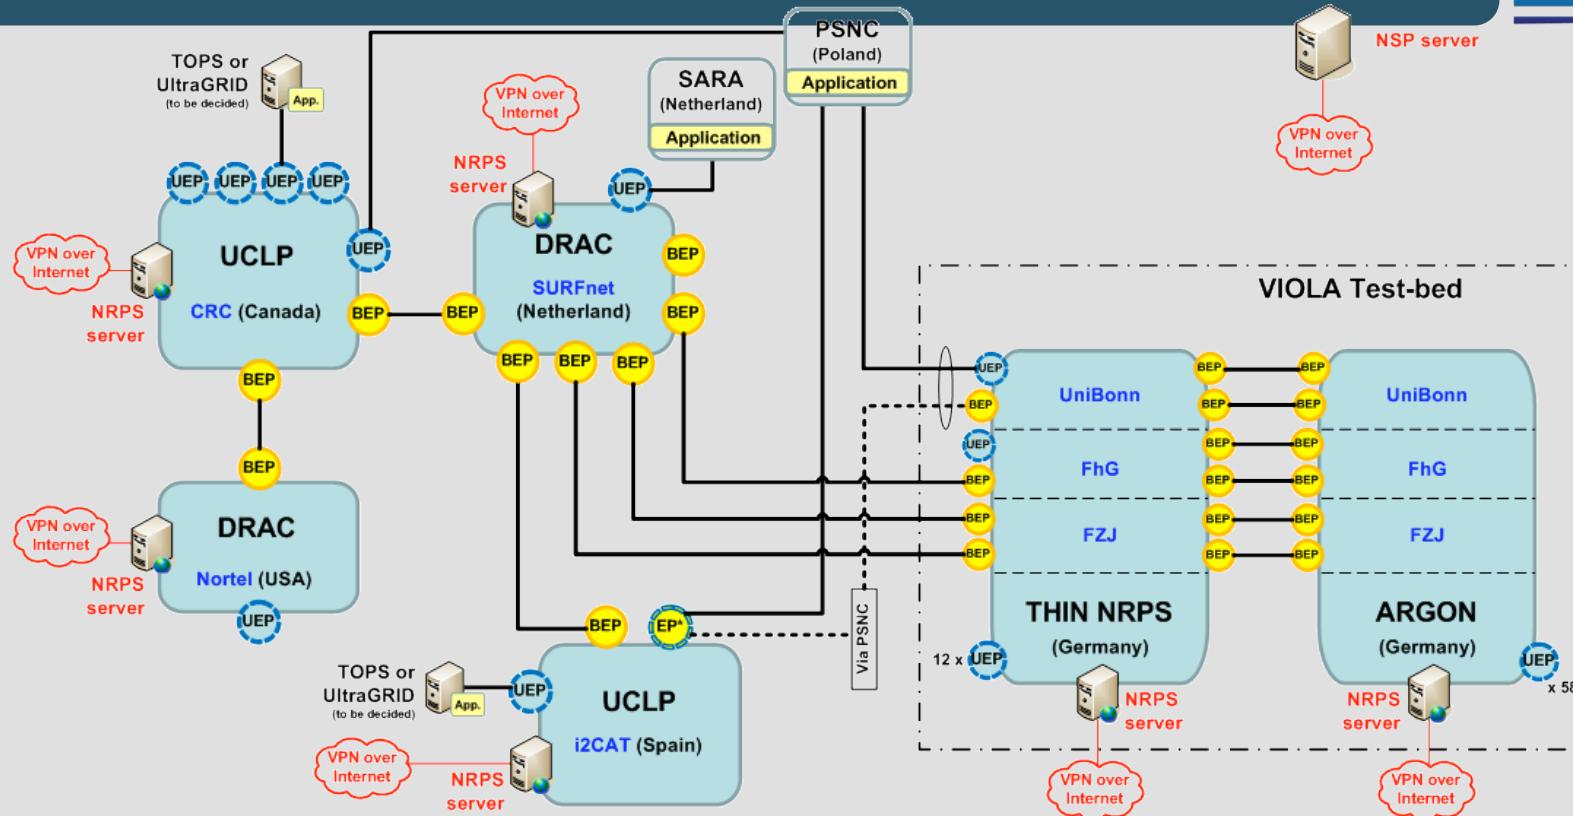

'zoom'

To be integrated after M18 (Phase 2)

Management architecture. Logical view

Step1 by December 2007

- Add topology information to the system (domain, link, endpoint)
- Create an immediate/advance reservation E2E across different domains/NRPS, with a selected BW and specific duration.
- 1 PHY port corresponds to 1 EndPoint
- No inter-domain BW management
- Use a THIN NRPS to control a GMPLS domain
- The NSP provides also a Path Computation algorithm

Step2 by March 2008

- Finish implementation of all advance reservation features to be able to create an advanced reservation end-to-end connection across domains
- Use embedded AAI in corporation with WP3
- Implement BW management that considers underlying technology
- Integrate the MW-WS
